Week 5 Report: BragBoard – Reactions & Comments Module

Executive Summary

- Focus: Implementing reactions (like, clap, star) on shout-outs
 - Goal: Enhance engagement and appreciation culture
 - Outcome: Functional reaction system with live updates and user tracking
-

Objectives

- Add three reaction types
 - Enable real-time updates
 - Track user-specific reactions
 - Prepare for comment system integration
-

Backend Enhancements

- New table: Reactions
- Fields: id, shoutout_id, user_id, type
- FastAPI endpoints:
 - POST /react
 - GET /reactions/{shoutout_id}

Frontend Integration

- React components:
 - ReactionButtons.jsx
 - ReactionCounter.jsx
- Tailwind styling for icons and counters

Reaction Types

- 👍 Like: General appreciation
 - 🖐️ Clap: Team celebration
 - ★ Star: Highlight exceptional effort
-

UX Design Decisions

- Hover tooltips for reaction meaning
 - Color-coded counters
 - Animated feedback on click
-

Real-Time Updates

- WebSocket integration for live reaction count
 - Fallback: Polling every 10 seconds
-

User Tracking Logic

- Prevent duplicate reactions
- Allow reaction change
- Store per-user reaction history

API Documentation

- POST /react
 - Body: { shoutout_id, user_id, type }
- GET /reactions/{shoutout_id}
 - Returns: { like: 10, clap: 5, star: 3 }

Database Snapshot

Sample entries:

id	shoutout_id	user_id	type
1	101	5	like
2	101	6	clap

Testing Strategy

- Unit tests for API
 - Integration tests for frontend
 - Manual UI testing across roles
-

Bug Fixes

- Fixed duplicate reaction issue
 - Resolved counter mismatch on refresh
-

Performance Metrics

- Reaction latency: < 200ms
 - DB write speed: optimized with indexing
-

Accessibility

- Keyboard navigation for reactions
 - Screen reader labels added
-

Mobile Responsiveness

- Reaction buttons scaled for touch
- Tested on Android and iOS

Security Measures

- JWT validation for reaction endpoints
- Role-based access: only employees can react

Edge Cases Handled

- Reaction removal
 - Multiple reactions from same user
 - Offline mode fallback
-

UI Screenshots

- Desktop and mobile views of reaction bar
 - Before and after reaction click
-

Team Contributions

- Frontend: Cheethirala
 - Backend: Priya
 - QA: Arjun
-

Feedback from Users

- “Clap feels more expressive than like.”
 - “Star makes me feel recognized.”
-

Analytics Preview

- Most reacted shout-out
- Reaction trends by department

Integration with Comments

- Reaction logic reused in comment likes
 - Shared component library
-

Deployment Notes

- Feature deployed to staging
- Netlify + PostgreSQL sync verified

Documentation Updates

- README.md updated
 - Swagger API docs refreshed
-

Risks & Mitigation

- Risk: Reaction spam
 - Solution: Rate limiting + cooldown
-

Learnings

- Importance of real-time UX
 - Balancing simplicity with expressiveness
-

Next Steps

- Week 6: Commenting system
 - Week 7: Admin moderation tools
-

Summary of Achievements

- Reaction system live
- Real-time updates working
- User feedback positive

Appendix A – Code Snippets

```
@app.post("/react")
```

```
def react(data: ReactionSchema):
```

```
    # Save or update reaction
```

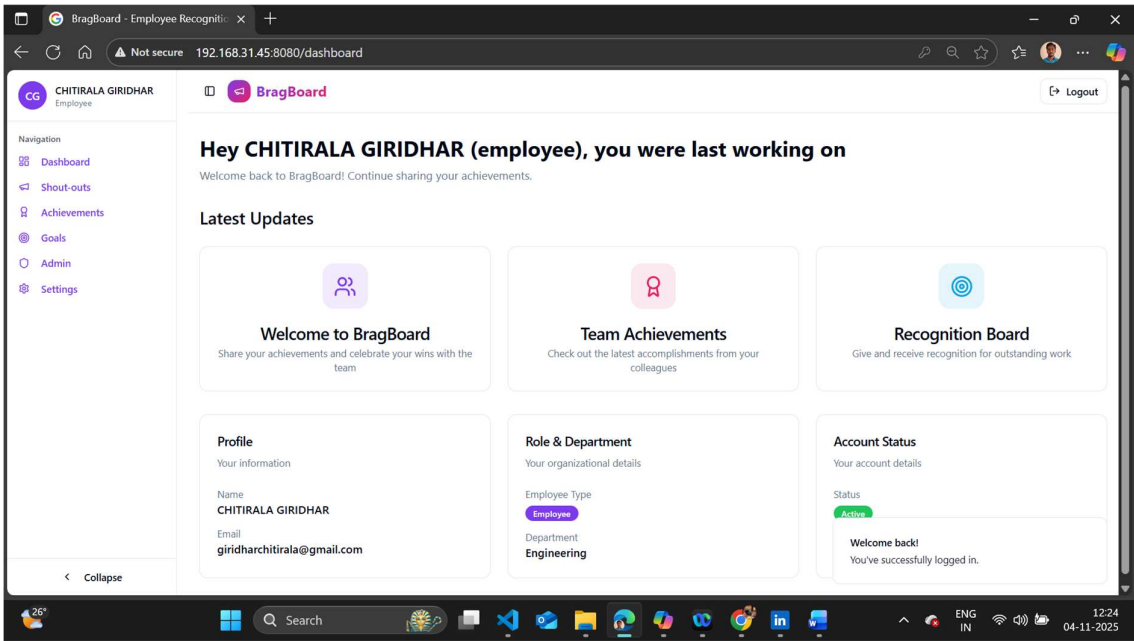

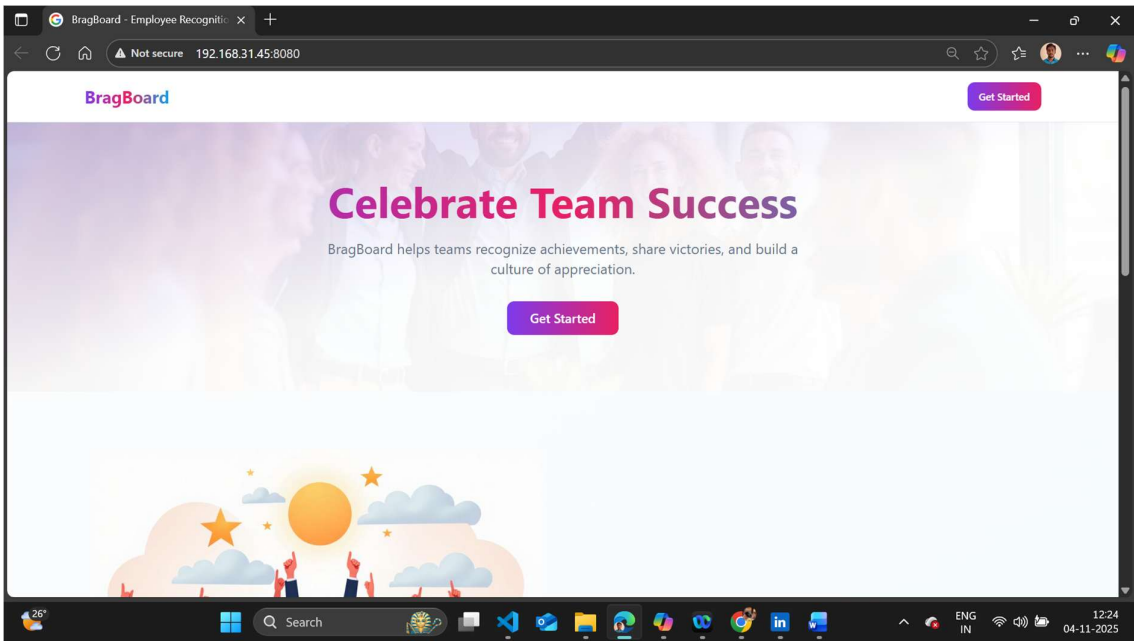

Appendix B – Reaction Component (React)

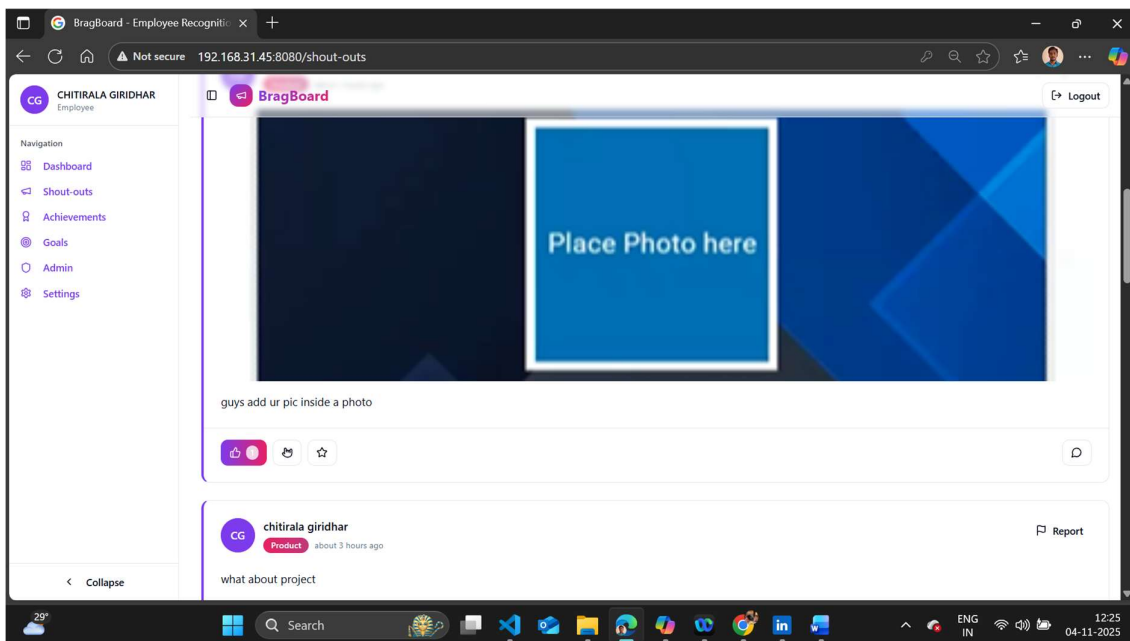

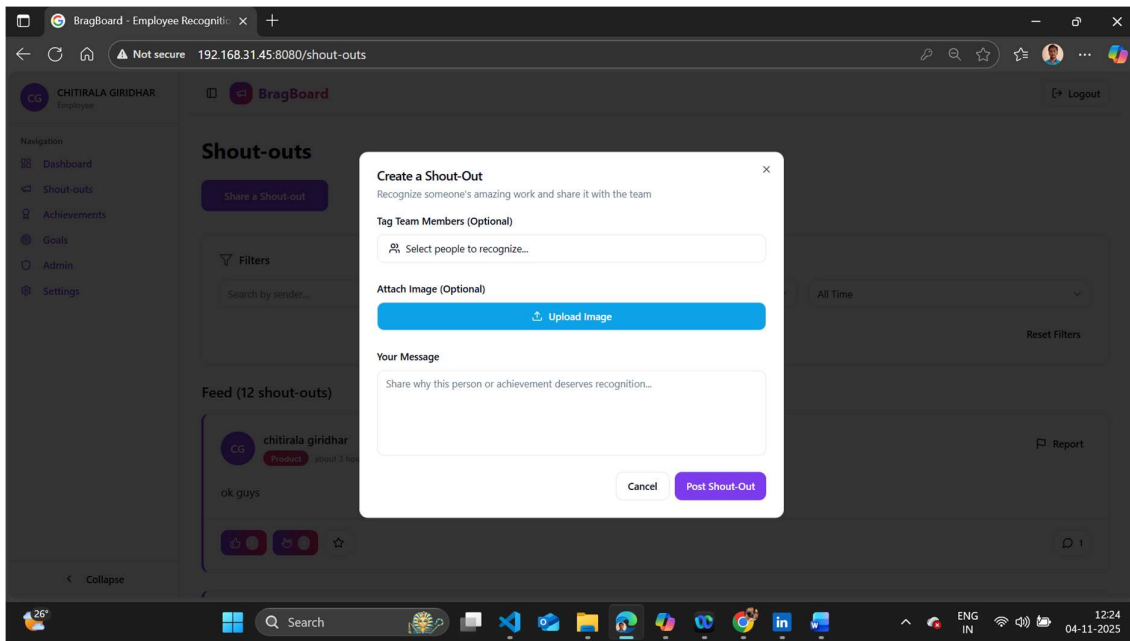

```
<button onClick={() => handleReact('clap')}>
```

```
    🙌 {clapCount}
```

```
</button>
```
