

Project Name: Brag Board

Project Title: Admin Dashboard, Moderation Tools & Reported Shout-Out Review

Submitted by: *Battula Sruthi Keerthi*

Under the Guidance of: *Respected Madhuri Mam*

Task Objectives

1. Build an admin dashboard to view system insights.
 2. Provide admin tools to delete posts and comments.
 3. Add a section to review and resolve reported shout-outs.
 4. Implement role-based access control for admin features.
-

What I Did

This task involved creating tools for administrators to manage platform activity.

Frontend Work

- Designed a **dashboard** showing:
 - Top contributors
 - Most tagged users
 - Most active departments
- Built admin tables for viewing posts/comments.
- Added buttons for deleting or moderating content.

Backend Work

- Created FastAPI routes for admin actions:
 - Deleting posts
 - Removing comments
 - Fetching reported shout-outs
- Implemented role checks so only admins can access these features.

Reporting Section

- Built UI for admins to review flagged posts.
- Added options to mark them as resolved or remove them.

What I Learned

- Importance of **role-based authorization**.
- Building dashboards with aggregated data.
- Implementing content moderation workflows used in real systems.

Outcome

A fully functional admin panel with analytics, moderation, and review tools.

Challenges Faced

- Handling permissions in both frontend and backend.
- Aggregating analytics data efficiently.
- Styling dashboard cards and charts.

Reflection

I now understand how admin modules are built to maintain platform safety and quality.

Acknowledgment

I sincerely thank **Madhuri Mam** for her insights on building secure admin workflows.
