

Project Name: Brag Board

Project Title: Final Deployment, Testing & System Polishing

Submitted by: *Battula Sruthi Keerthi*

Under the Guidance of: *Respected Madhuri Mam*

Task Objectives

1. Deploy the full Brag Board application.
 2. Perform complete testing and debugging.
 3. Optimize performance and fix UI/UX issues.
 4. Finalize documentation and ensure system readiness.
-

What I Did

This final task ensured that the entire system was stable, usable, and ready for real-world use.

Deployment Work

- Prepared the production build of the React frontend.
- Configured FastAPI backend and environment variables.
- Set up hosting and deployment tools.

Testing Work

- Conducted:
 - Functional testing
 - Security testing
 - UI responsiveness testing
 - Form and API validation testing
- Fixed bugs found during the test cycle.

Final Polish

- Improved layout consistency with Tailwind CSS.
- Refined spacing, alignment, and component responsiveness.
- Updated documentation and prepared final project notes.

What I Learned

- How to deploy a full-stack application.
- Importance of final testing and polish in real-world software.
- Managing production builds and environment settings.

Outcome

The Brag Board system is successfully deployed and functioning smoothly. All modules work together, offering a complete recognition platform.

Challenges Faced

- Deployment configuration errors.
- Environment variable management.
- Cross-browser UI alignment issues.

Reflection

This final task gave me confidence in launching real applications and understanding the complete development lifecycle.

Acknowledgment

I sincerely thank **Madhuri Mam** for guiding me throughout the entire internship and project.
